

Using IF Statements in Excel

If you are asking yourself "What is an IF statement?", then you are among the majority of Microsoft Excel users. If you are already familiar with IF statements, then you might find these two first sentences amusing as they are in fact IF statements themselves. The IF statement is a very powerful tool incorporated into Excel that can turn your spreadsheets into something that not just displays your data, but that will actually make decisions on your data as well (making your life easier). Wouldn't it be nice to tell your spreadsheet to make correct decisions for you and display the results depending on what criteria you specify?

Normally, I like to create my own "How to" documents, but this week I've found a couple of websites that actually do a very good job of introducing IF statements, when reviewed together. Just click the links below and enjoy your new power!

NOTE: Please take these links for what they are, specific links to specific pages of the websites containing useful information. I have not reviewed the entire websites where these links are located. So, I cannot necessarily recommend or not recommend any other information or products found on the websites.

About Desktop Resources, Inc.

Desktop Resources, Inc. was founded in 1995 by Tony Schafer, and is a leader in helping organizations couple their business initiatives with the technology to address those needs. DRI's "InformIT" managed services offerings proactively manage client infrastructure and strive to prevent problems before they occur. For more details, contact DRI at (317) 596-3650 or <http://www.DesktopResources.com>
